John spent all of his paycheck on 7/11 last night, but he still needs to buy his Psych 101 textbook (it's halfway through the semester).

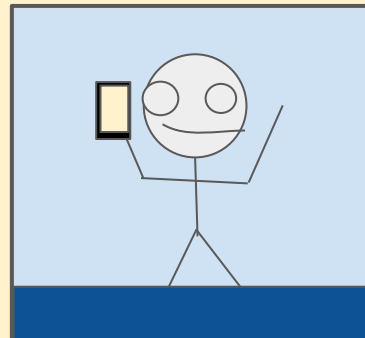

He is too lazy to pirate, and he also has no time to do so because he has 4 unstarted papers that are past due. His mom's about to disown him if he doesn't get his life together.

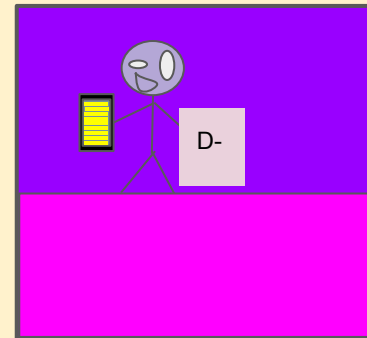

He knows how to use his phone, if anything, and he really knows how to use apps.
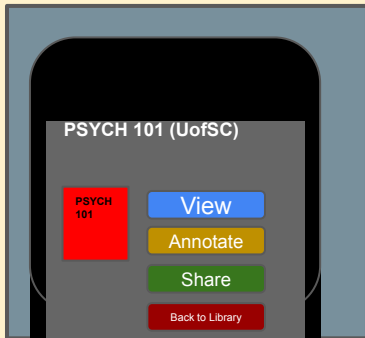

He downloads an open resource textbook library that contains his Psych 101 Textbook.

He now has one thing done on his ever-growing, result of procrastination to-do list! He can actively choose not to study instead of being unable to do so!

By cramming with the PDF textbook, he passes his Psych final two months later! He also got to highlight a ton of paragraphs out of boredom! He even shared annotations with his friends!
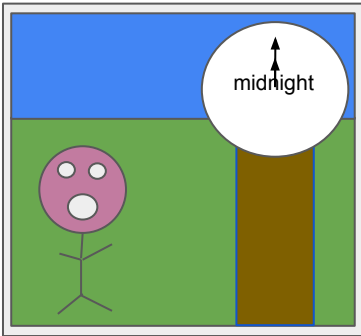

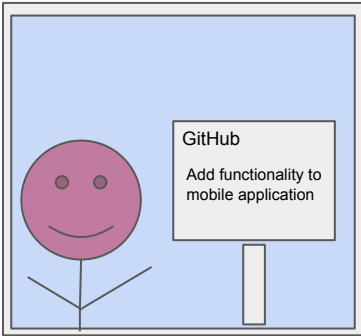

When the clock struck midnight, John realized that he only had the next 24 hours to finalize the textbook application.

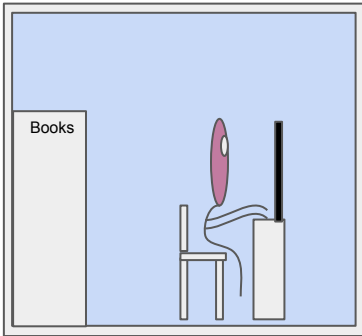

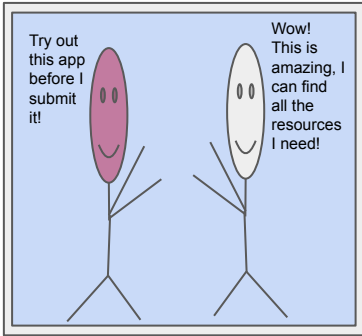

Wasting no time, John got to work. The end of the application was nowhere in sight.

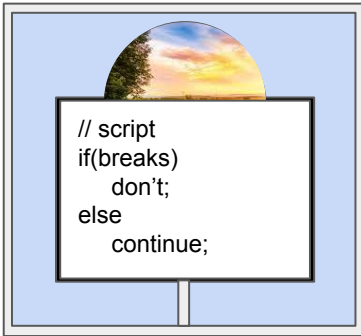

Through the night and into the morning, John was working diligently to finish the app.

With little to no experience with responsiveness in HTML and CSS, John had to teach himself how to add functionality to the application with the help of GitHub

With his new knowledge, John was able to create design where users are able to interact with different components of the application, such as viewing, annotating, sharing, or going back to the main library.
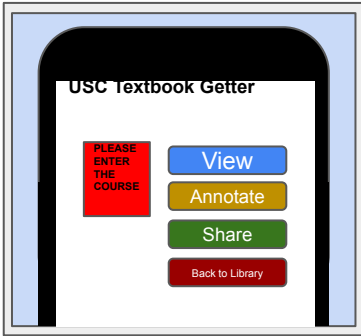

At 11:59 PM, only a minute left before the deadline, John submitted the final version of the application. It was DONE.
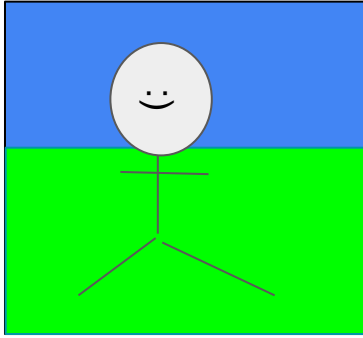

Steven Steven has just begun his day. He is excited because it is Thursday, and on Thursday, he goes to the library.

Steven now is tasked with searching for books on a list of ones needed. Specifically, those that are library licensed.

Steven has now found a resource that is not currently available on the textbook application. It is, however, available for him to copy.

Though it takes a long time and many pages, he uses the available printer to copy each page and turn it into a pdf version of the entire book.
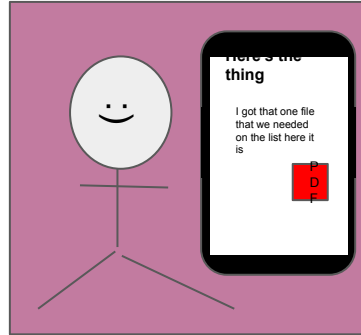

He now takes the file and downloads it to his phone, before then sending it over the development team regarding the name and version of the book he was able to scan.
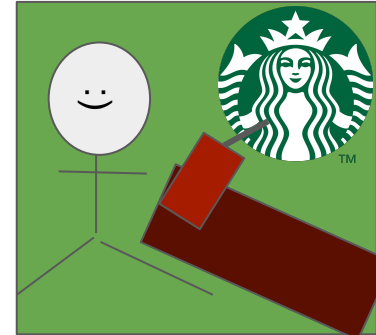

With a days work done, Steven goes to starbucks to get a delicious drink.

PERSONA: Aniya Lou (CUSTOMER) USER STORY/SCENARIO: Aniya needs to buy her math textbooks but hasn't gotten her paycheck yet.

Oh my gosh I'm going to fail this next quiz too

Aniya had been doing bad on her calculus quizzes.

Maybe I should buy the textbook

She did not buy the textbook because her teacher posts all the homework. Now she thinks she

I haven't gotten my paycheck yet and I've spent all my money

She has been working at Walmart but spent all her money on yarn! She needs a way to get the textbook.

I heard there's an app for students to get textbooks for cheap

She decides to download the library's free textbook resource.

Textbooks

Wow! It says I can get my calculus textbook for free!
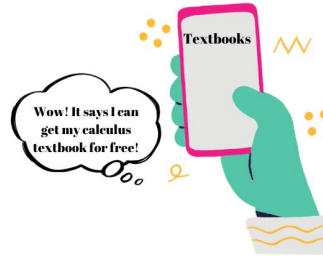

She got her calculus textbook for free!

I'm doing so much better in class now that I bought the book!

She has been doing way better on her quizzes now that she has read the textbook
